

Gel-Filled Drain Cover

Drain protection is an essential element in a spill control plan. In the event of a spill, unwanted liquid pollutants must be prevented from entering waterways and into the environment via stormwater drains. The SpillSmart Gel Filled Drain Cover is highly resistant to many liquids and creates a seal by the activation of specially designed polymer powder that activate with water. The expanding powder converts to a gel like mass in the seal pocket easily moulding to uneven surfaces when pressed into place around the drain opening.

The Drain Cover is manufactured from Heavy Duty 900gsm PVC and features 4 x 25mm webbing handles for convenient hanging storage and lifting. An internal sewn foam layer in the base enhances its ability to seal, finished with a 270gsm Geofabric polypropylene underside.

Contact your local Distributor for further information about this product and others in our range.

Designed for:

- Preventing liquid contaminants from entering a drain opening
- Uneven or unsealed surfaces around the drain opening
- Storing close to high risk spill area's close to drains
- Placing over a drain opening whilst a spill is being cleaned up
- Placing over a drain opening when working close by with liquid contaminates
- Industrial sites
- Factories
- Construction sites

Features:

- Heavy Duty 900GSM, UV stable PVC in High Visibility Yellow
- 25mm industrial webbing Handles for carrying and convenient hanging storage
- Standard sizes with custom made to measure options
- Gel seal moulds to uneven surfaces
- Easy to clean with warm soapy water
- Reusable
- Made in Australia
