

# Silt Warden

Basin

SpillSmart Silt Warden has been designed for industrial and construction work sites. It's highly effective with preventing drains from becoming congested. This heavy duty drain filter is installed easily and fits securely under the drain grate. Sitting suspended, the filter captures, sand, dirt, sediment, rubbish, worksite debris, leaves and sticks whilst water passes through with ease.

It features bright Yellow Heavy Duty, UV protected PVC. Visible externally around the drain, it can be easily seen by site inspectors and worksite personnel. For convenience, 2 external handles are fitted on 2 sides of the PVC skirt, with another 2 handles included on the basin. The filter fabric is a 300gsm UV stabilised HDPE knitted construction with a 100 /m/s flowrate. This durable fabric can be emptied, washed and reused.
